SUMMARY

- Mechatronics Graduate from Astra Polytechnic with strong experience in robotics, automation, and industrial control systems.
- Completed an exchange program at The Hague University of Applied Sciences, majoring in Smart Manufacturing and Robotics (SMR).s
- Hands-on expertise in servo motor control, pneumatic systems, and Python-based automation.

SKILLS AND STRENGTHS

- **Programmable Logic Controller (PLC)**
Proficient in designing, programming, and troubleshooting Mitsubishi and Omron PLCs for automation systems.
- **Servo Motor Systems**
Experienced in configuring and programming servo drives (CMMT Series, CMMB Series, and MR J4 Series) for precision clamping and positioning applications in manufacturing processes.
- **Pneumatic Systems**
Skilled in pneumatic circuit design, control logic integration, and fault troubleshooting in automated machinery.
- **Python Programming**
Strong command of Python for automation, data processing, and vision applications (OpenCV, NumPy, Tkinter).
- **Robot Programming**
Experienced in coding and configuring Omron TM12 and Doosan 6-axis robots for industrial tasks such as spot welding and pick-and-place.
- **Microcontroller / IoT**
Experienced with Arduino for developing smart sensor-based systems and machine interfacing.
- **Visual Basic Application (VBA)**
Developed custom HMIs to interface with external devices through serial communication.
- **Leadership & Teamwork**
Strong collaboration and responsibility in cross-functional engineering teams.

EDUCATION

- **D3 Mechatronics Engineering (GPA: 3.61)**
Astra Polytechnic (2021-2024)
- **Smart Manufacturing and Robotics**
The Hague University of Applied Sciences (2023-2024)
- **Natural Science**
SMAN 4 Kota Tangerang

WORK EXPERIENCE

- **PT GS Battery**
Process Engineer (Aug 2024 – Present)
 - Developed a servo-driven press welding machine using multiple servo axes for high-precision clamping, position-based control..
 - Integrated GX Works2 logic with advanced instruction for controlling servo drives with Modbus protocol.

-Combining servo with pneumatic cylinder for more reliability, and less load to motor for better lifetime.

- **Logicall B.V.**
SMR 2 Project (Nov 2023 – Jan 2024)
Programmed Doosan 6-axis robot for high-speed pick-and-place tasks.
Built a computer vision system using Python and OpenCV for object detection and classification.
- **ID-tec B.V.**
SMR 1 Project (Sep 2023 – Nov 2023)
Programmed Omron TM12 robot to perform precision spot welding in confined spaces.
Developed a Python-based HMI for robot control and process monitoring.

ORGANIZATIONAL EXPERIENCE

- **Telkominfo Division - HIMMA Mekatronika Politeknik Astra**
Designed social media content and documented event activities.
- **Treasurer - Robotics Student Activity Unit**
Managed financial operations and budget allocation for the robotics division.

AWARDS AND CERTIFICATIONS

- 3rd Place - Polines Electro Expo Competition 2023
- TOEIC: 890 / 990
- IISMAVO 2023 Awardee - The Hague University of Applied Sciences, The Hague, The Netherlands
- Level 3 Equipment Maintenance Certification
